Hi Liz,

Happy Friday!

I only have one comment on the excellent work you and your team did!  
There is a donut hole between Class I and II

Class one maximum rebate is \$55,000.  
Class two minimum rebate is \$40,400.  
Class two at 140KW is \$56,000.

A transition rate between 100kw and 200Kw might eliminate the disincentive of doing a project in that range. In a situation where 120kw is the right size a rebate of \$48000 might cause some one to drop down to a 100kw.

This may be very significant if net metered projects under 100KW loose the ability to Net Meter full cost.

--

Have a great day!

Bob Hayden
